ALUMINIUM

寶菱新材料有限公司

Palron New Materials Co Ltd

1

Raw Vertical Edge

Crimped down over the cover, the raw vertical edge provides a tight closure, while the support offered by the cover increases the strength of the pack.

未加工的垂直的邊緣
此設計透過蓋子令邊緣卷下，提供了容器密封能力，並避免食物溢出的能力。

5

Interrupted Vertical Curl

The combination of a raised, curled edge on the sides and a raw vertical edge on the corners offers maximum strength and a tight closure. This rim style is ideally suited for a Coverlok Closure, which can improve both leak resistance and tamper evidence.

斷裂垂直的捲邊
此設計結合舉起及捲曲的未加工邊緣，提升其柔韌度及緊緻封閉。這種設計很適合Coverlok容器，能改進及阻止溢流的發生情況。

2

Raw edge

(other than vertical)
Designed for products where lidding is not required.

未加工的邊緣
(除了垂直)
此設計適合於沒有添加蓋子的容器。

6

Full Curl Vertical

Specially designed to take a board lid that can be applied and closed manually-ideal for Gastronorm and other large containers.

縫邊緣的邊
由於垂直的邊緣的末端摺疊消除了未加工的邊緣，這種設計給垂直的邊緣容器能夠採用紙板或PVC蓋子，令產品能夠達到密閉能力。

3

Full Curl

This rim style makes the container ideally suited for high speed dispensing machines on production lines.

完全的捲邊
這種邊緣設計的容器，很適合在生產線上的高速分發機器。

7

Hemmed Edge

With the end of the vertical edge folded to eliminate the raw edge, this design provides similar closure options to the vertical edge container with either board or PVC lids.

完全的捲邊垂直
特別是設計給紙板蓋子使用，並且適合Gastronorm和其他大容器的蓋子能夠使用。

4

Full Raised Curl

The product gains additional protection from this rim style which gives maximum strength and rigidity. The evenly rounded edge allows these containers to be lidded with snap on plastic lids.

完全的舉起的捲邊
此設計獲得最大的柔韌度和硬度的特性。邊緣均勻設計令容器能夠提升直接固定塑膠蓋子裝蓋子的能力。
